

ELOCTATE
[Antihemophilic Factor
(Recombinant), Fc Fusion Protein]

SOMETIMES IT'S WHAT YOU CAN'T SEE THAT YOU COUNT ON THE MOST

That's why you need a Factor VIII
treatment you can count on.

FACTOR QUICK FACTS

- ✓ Only Factor can resolve bleeds when they occur.
- ✓ ELOCTATE was the first recombinant Factor product with an extended half-life.
- ✓ In a study comparing the average half-life, ELOCTATE was shown to last 50% longer in the body than ADVATE^{®1}.

¹ADVATE[®] [Antihemophilic Factor (Recombinant)] is a registered trademark of Baxalta Incorporated, a Takeda company.

YOU HAVE QUESTIONS. CoRes HAVE ANSWERS.

If you want to learn more about ELOCTATE and why Factor is part of a successful prophylaxis treatment, CoRes or Community Relations Education Managers are here to help. CoRes aren't just experts on ELOCTATE, they're part of the hemophilia community and can connect you to the information and support you need.

INDICATION

ELOCTATE[®] [Antihemophilic Factor (Recombinant), Fc Fusion Protein] is an injectable medicine that is used to help control and prevent bleeding in people with Hemophilia A (congenital Factor VIII deficiency). Your healthcare provider may give you ELOCTATE when you have surgery.

IMPORTANT SAFETY INFORMATION

Do not use ELOCTATE if you have had an allergic reaction to it in the past.

Tell your healthcare provider if you have or have had any medical problems, take any medicines, including prescription and non-prescription medicines, supplements, or herbal medicines, have any allergies, are breastfeeding, are pregnant or planning to become pregnant, or have been told you have inhibitors (antibodies) to Factor VIII.

Allergic reactions may occur with ELOCTATE. Call your healthcare provider or get emergency treatment right away if you have any of the following symptoms: difficulty breathing, chest tightness, swelling of the face, rash, or hives.

Your body can also make antibodies called "inhibitors" against ELOCTATE, which may stop ELOCTATE from working properly.

Additional common side effects of ELOCTATE are headache, rash, joint pain, muscle pain and general discomfort.

If you have risk factors for developing abnormal blood clots in your body, such as an indwelling venous catheter, treatment with Factor VIII may increase this risk.

These are not all the possible side effects of ELOCTATE. Talk to your healthcare provider right away about any side effect that bothers you or that does not go away, or if bleeding is not controlled after using ELOCTATE.

Please see [full Prescribing Information](#).
